As a Paranoid Schizophrenic this 'head box' represents the way see myself. strange, complex, mis-interperated, colourful, yet human. Being diagnosed as "higher-functioning signifies my awareness of my Disability although I cannot controlit. My means of management is by closing the box. The exterior is a self - portrait. The interior is the inside of my head. The streams of stimuli from and to each orifice represents the barrage of information that my mind processes every second of every day. Some are reality some hallucinatory. The flow out of the center are my thoughts. The hinges restrict anyone, including myself, looking too deeply inside my mind as extensive Psychotherapy has taught me that it is unhealthy to do so HEAD Box - polychromal acrylic, wool, card magazine and newspaper clippings, string on card box.
