

NEW
SERIES

Urban Transport Futures

Series Editor: **William Riggs**, University of San Francisco

Urban Transport Futures explores how changing technologies and transport innovations are influencing possibilities for our cities and city futures across the globe.

Books in the series will be international in focus and examine the ways that urban transport intersects with technological evolution, sustainability and climate change and social justice.

The series is seeking innovative, cutting-edge research that will inform the development of urban transport policies and ensure that innovations in urban development are a force for social good. It will provide academics, policymakers and city planners with the insights and tools to ensure that future transport systems are sustainable, equitable and inclusive.

Bringing together experts, scholars and industry insiders across multiple geographies, this series will lead the debates on challenges and opportunities for urban transport.

Call for book proposals

The series welcomes proposals which are:

- Authored or edited and between 60,000 and 80,000 words;
- Academically grounded, written accessibly and offer visions for policy makers, city planners, and academics;
- Including examples that help shape the future of sustainable and socially just transportation systems;
- Providing an international range of stories and analysis.

Desired topics include, but are not limited to:

- Ethics, big data and privacy;
- The future of mass transit;
- The future of logistics;
- The future of streets and landscapes;
- Climate change;
- The future of mobility-as-a-service and taxis;
- Managing new mobility;
- Micro-mobility;
- Future transport and budgets;
- The future of psychology and transport.

Contact us

If you would like to discuss a proposal, please direct your email to the Series Editor and, if desired, the Senior Commissioning Editor in your area of interest:
